

HOW TO DO LEARNING ACTIVITY #2, SECTION 6.2

Although it requires you to do two integrals it is actually a technological quiz because the mathematical part should be pretty straightforward if you know how to access the Student Solutions Manual.

This assignment requires you to upload a file to Canvas displaying your handwritten work.

Exactly how you create the file for submission is up to you, but the file(s) submitted must be of the pdf, jpg, or jpeg file format. Here are a few options, among others:

1. If you have a tablet, just download the quiz, write your answers, save as a pdf with questions answered, and upload.
2. If you have a printer and scanner, just download and print, write your answers on the blank pages, then scan and upload the answered document. It is preferable to do this in a way that merges both pages into one pdf file, though submitting two files (one for each page) is acceptable.
3. If you have phone with camera, you can download and install the Canvas Student app on your phone, then go into Assignments. When you click on Submit, Canvas gives you the option use your camera to take a photo for submission. This will only allow you to do one page at a time, but allows multiple file submissions, so you can try doing this with one file for each page.
4. If you have phone with camera, you can use a camera-scanning app (like camScanner). It is preferable to do this in a way that merges all pages into one pdf file. Some apps will do this, some won't, and you have to play with it a bit to see how to do it. If you can't do this, however, submitting multiple files (one for each page) is acceptable.
5. Anything you come up with on your own, so long as it satisfies the parameters in the grading guidelines above. **Only the pdf, jpg, or jpeg file types will be accepted by Canvas for this assignment.**

Grading Rubric: It will be worth 5 points according to these guidelines:

- 1 point for successfully uploading **TWO** pages, (1/2 point per page) with one problem per page, as either one two-page file or two one-page files. Even though you may be able to write everything on one page, you **must submit TWO pages because I want you to learn how to deal with multiple pages.**
- 1.25 points for answering the first question correctly, with supporting work, in your own handwriting. You can find the answer and solution in the Student Solutions Manual.
- 1.25 points for answering the second question correctly, with supporting work, in your own handwriting. You can find the answer and solution in the Student Solutions Manual.
- 1.5 pts for being legibility In particular, be sure your writing is dark enough to be easily read. You may need to tweak the settings (like contrast, brightness, etc) in your scanner/app to get this right. (For my scanner, for example, I use 150 dpi resolution, with brightness all the way down and contrast all the way up. You may have to play around to get something that works nicely for your particular technology.) If you are doing your work on a tablet (iPad, Surface, etc), use a darker color of ink.
 - If I can't read it, you will receive a grade of "1" just for submitting. You will be allowed to resubmit in that case, but with reduced credit and with a narrower time limit.
 - If it is legible, but of poor quality, **some points will be deducted**, depending on how severe it is, even if all the work is correct. In particular, be sure your writing is dark enough in the scan/photo.
