Pulse.filt on cameraman.jpg
Border Mechanism - Any pixel that fell out of the range was made black
Used summation of weights (negatives were turned to positive) as kernel scaling approach

pulse.filt - subtle blurring

tent.filt - much more noticeable bluring

Self created two filters. myfilter.filt and myfilter2.filt

Hp.filt - seems to highlight edges on other image test cases. This test case produces odd output

Sobol vert and horizontal do not behave as expected. They basically generate the same image as above
