**How to download and open the Hazard City Assignment program**

NOTE: VERY IMPORTANT!! If you have a PC you will need to download the program WinRAR to unzip the file that contains the *Hazard City* software. Macs should be able to unzip the .rar file automatically. WinRAR is available for free to all Clemson students <u>here</u>.
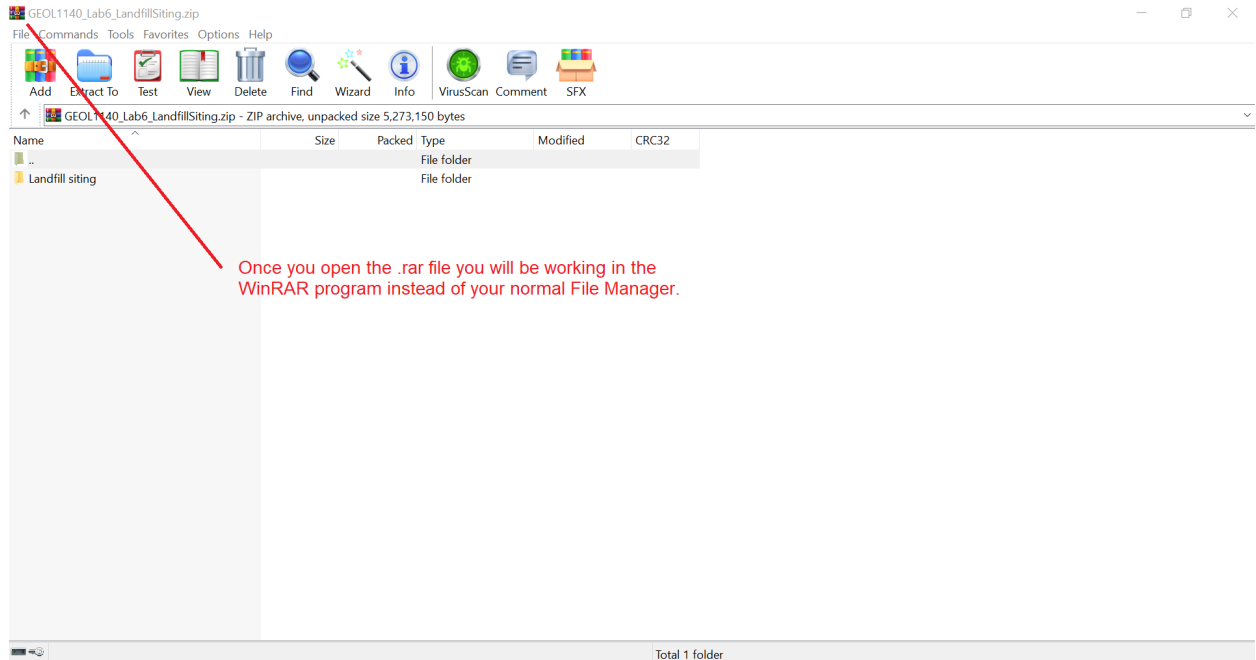

Getting this assignment running can be finicky, to say the least. For this reason, I strongly encourage you to <u>not leave this assignment until the last minute!</u> I can help you sort out tech problems, but not a couple of hours before the lab is due.

(1) If you have a PC, download and install the WinRAR program on your computer.

(2) Download the Assignment folder from Canvas (GEOL1140_Lab6_LandfillSiting). Save it to your Downloads folder or anywhere else that you can find it easily later.

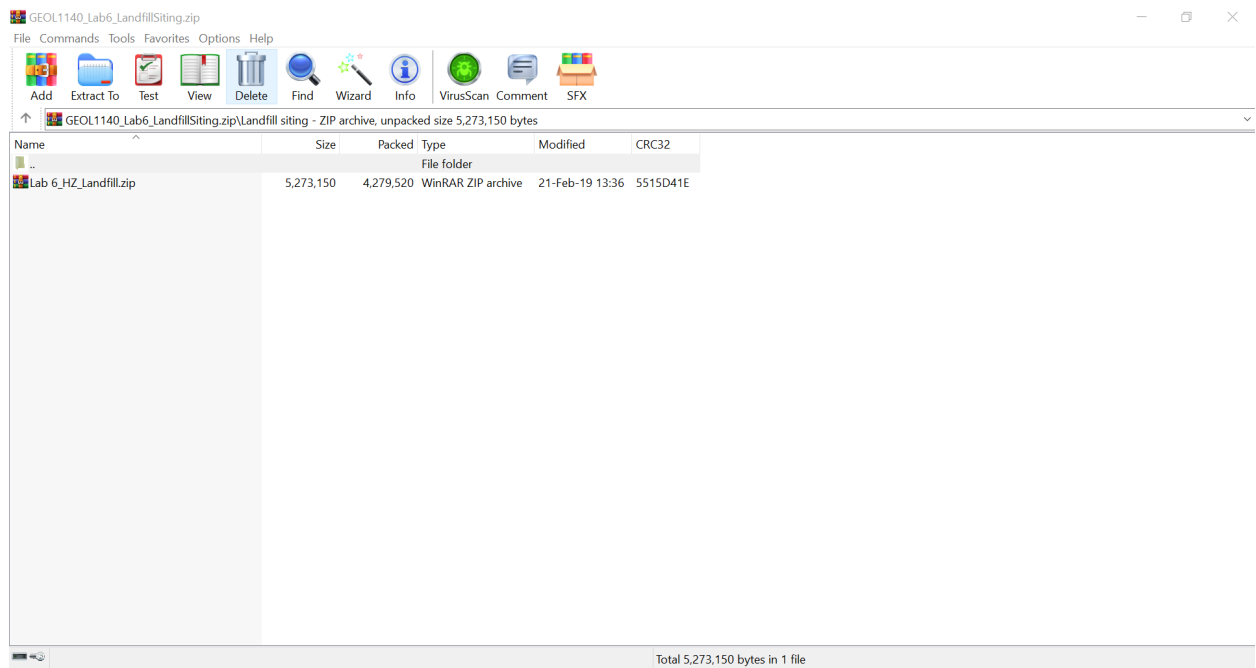

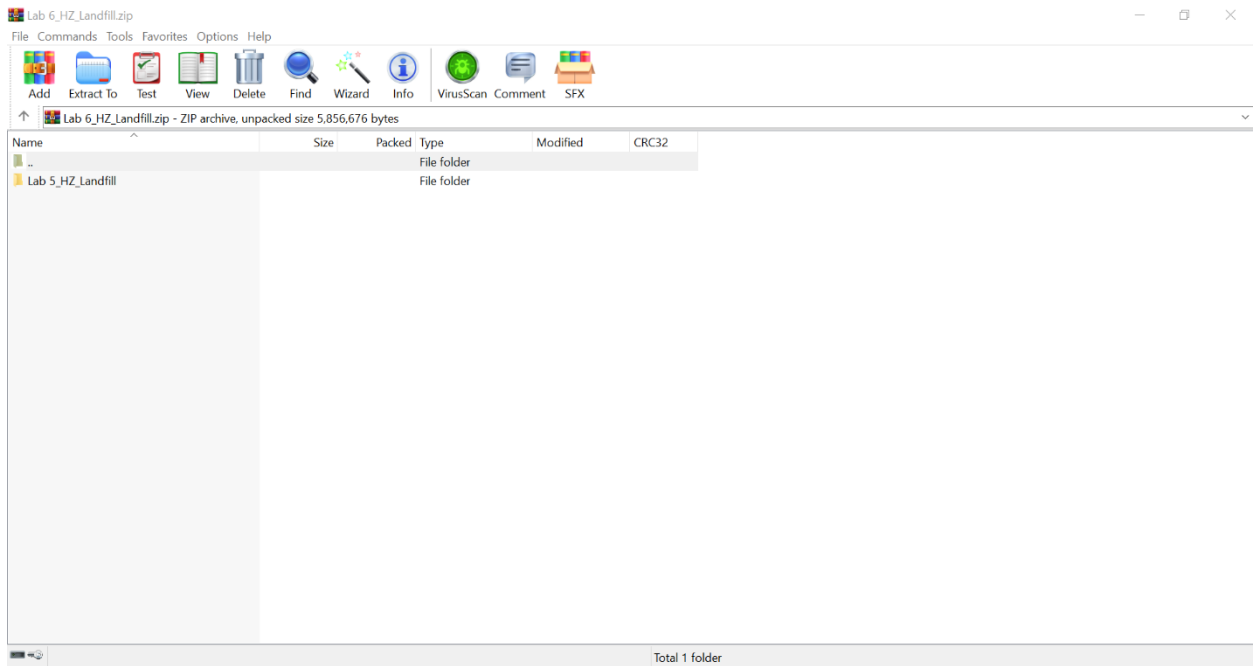

(3) Find the folder on your computer into which you download the *.rar* file. Double click to open it. The files should extract automatically and a new WinRAR window will open that shows the extracted files (or if using a Mac a new folder in which the contents can be viewed will be created).

(4) The extracted file will be a folder called "Landfill siting". Open this folder.

(5) That folder contains another .rar file that contains all the *Hazard City* program files that you need. Double click on this file (Lab 6_HZ_Landfill) to extract those files. The new folder that is created with the extracted files will be called "Lab 5_HZ_Landfill".
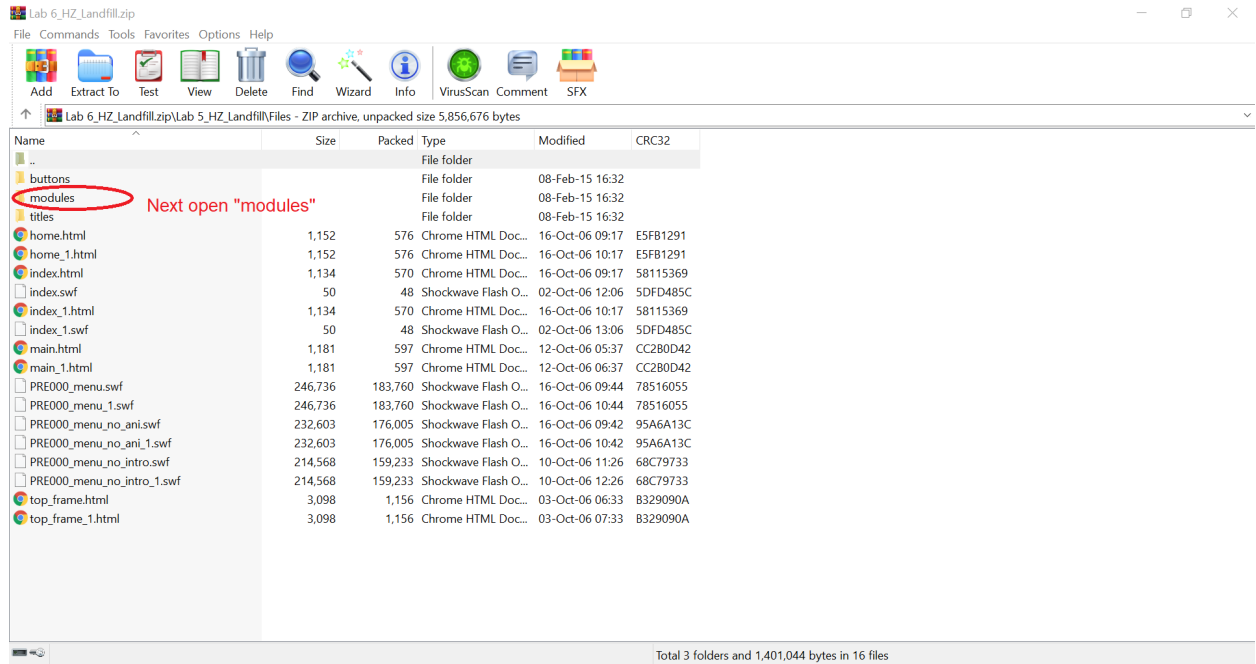

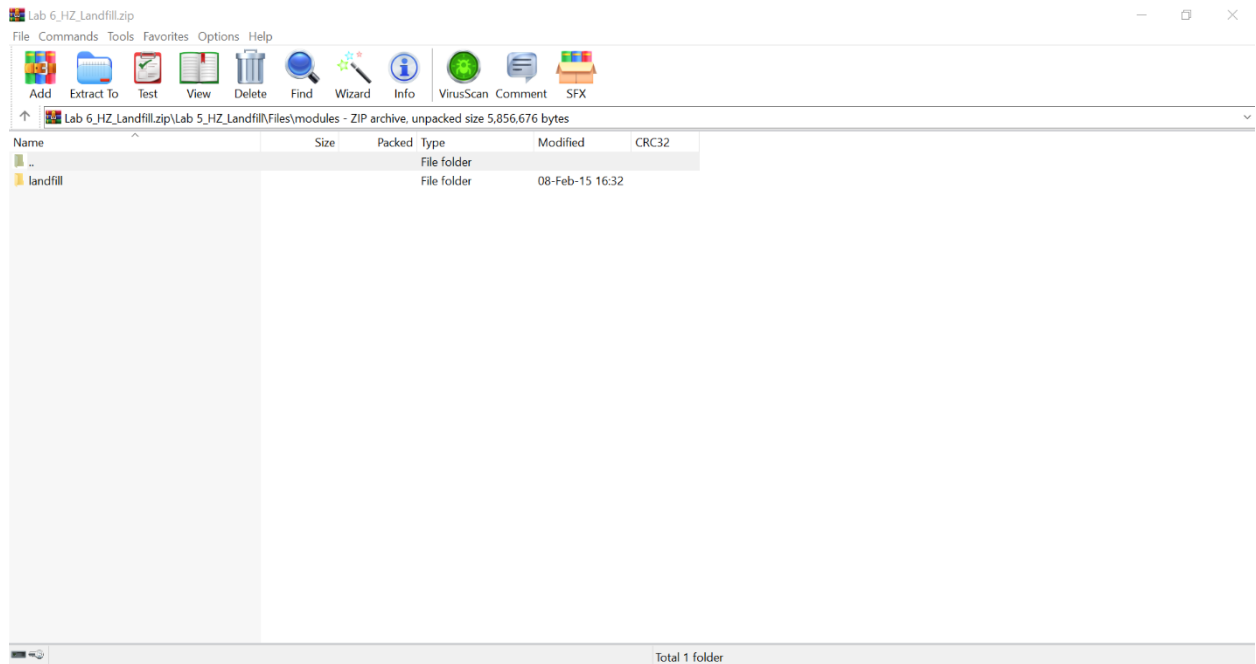

(6) Double click on the "Files" folder to open it.
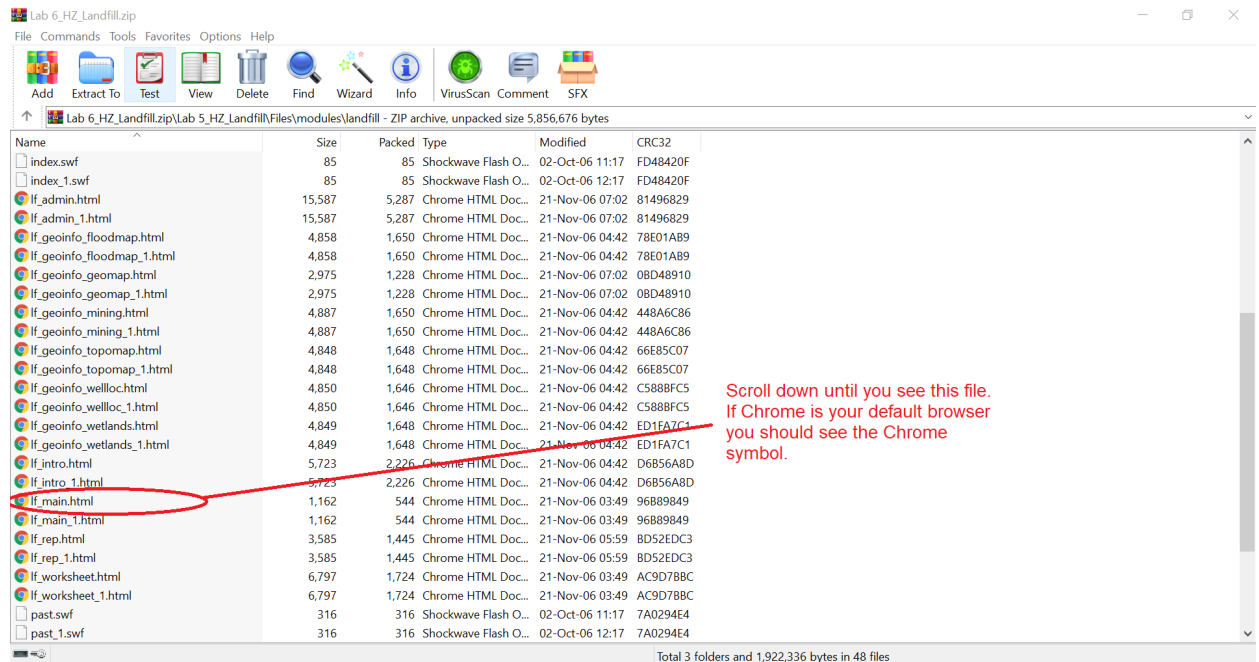

(7) Double click on the "modules" folder to open it.

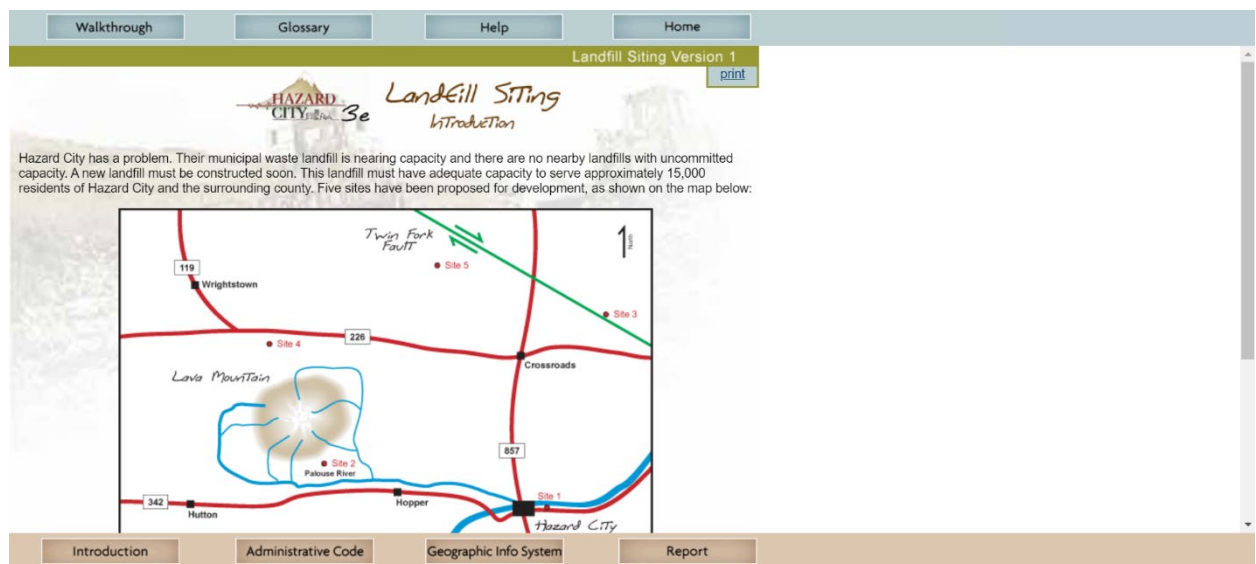

(8) Double click on the "landfill" folder to open it.

(9) The file you want to complete your assignment (finally!) is called "If_main.html" (NOT If_main_1.html). Double click this file to open it with a web browser.
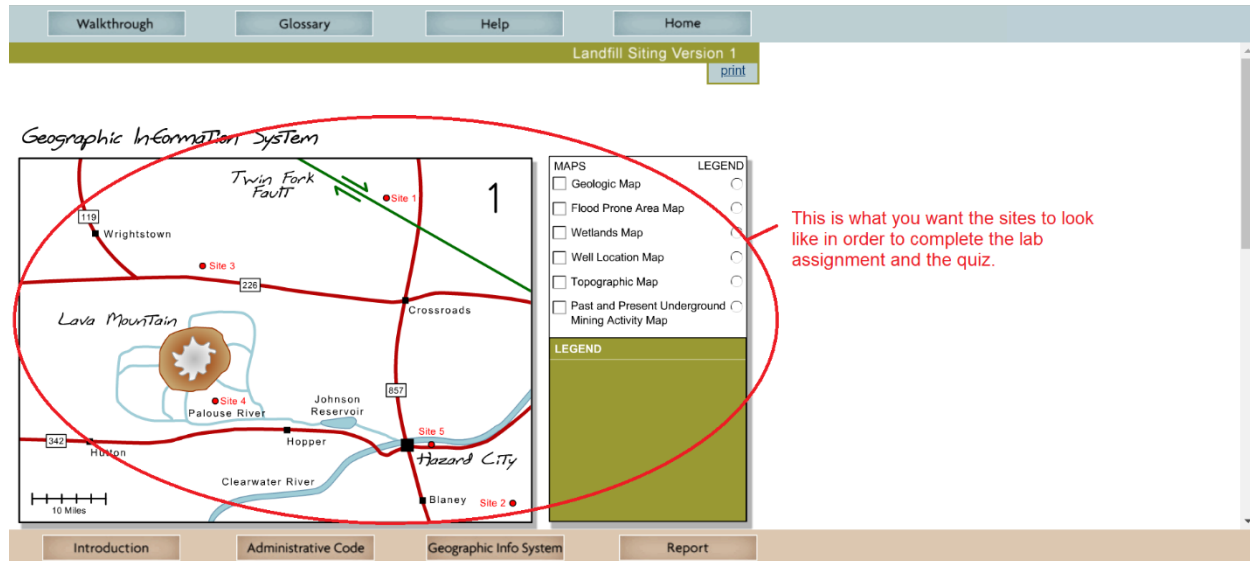

IMPORTANT: I have only tried this on Chrome. Apparently if you try and use other browsers it may not work, so I highly recommend that you download Chrome (for free!) and open this html file with that browser.

(10) You want to see the image below in your browser.

(11) You are now ready to begin the assignment! Now return to Canvas and follow the directions in the Lab 6 module. Remember that all the quiz questions refer to the sites numbers on the "Geographic Info Systems" tab, not the ones shown on the "Introduction" tab.

(12) If you have any problems email me or come into office hours!
